

"Iced" Colors

To introduce contrast in a color palette, a color can be "iced" by adding a **pearl** clay to the mix. Pearl introduces a subtle shimmering effect and like all metallics, it lends itself to any type of mica shift (or ghost imaging) technique. The chart below illustrates how colors cool down and shift as pearl is added, and how effective standard & iced colors together can be.

PREMO Base Color	PREMO Iced Color	PREMO Base Color	PREMO Iced Color	PREMO Base Color	PREMO Iced Color
 Peacock Pearl	 Peacock Iced	 Turquoise	 Turquoise Iced	 Cad Yellow	 Cad Yellow Iced
 Green Pearl	 Green Pearl Iced	 Purple	 Purple Iced	 Orange Mix	 Orange Mix Iced
